

Movie Ratings System

A movie rating is important in our social lives because it might deliver better entertainment. Typically, movie rating systems anticipate what movies a user would enjoy based on the characteristics of previously enjoyed films. Most existing movie services, such as IMDB (www.imdb.com), do not customize their suggestions and instead just provide a movie's aggregate rating. This reduces the value of each rating because it does not take into account the user's specific movie interests.

This project proposes a movie rating system that has the ability to assess each user's movie interests on a regular basis and make personalized movie ratings. The overall idea is to make finding movies easier. This movie rating service provides a list of movie ratings based on prior user ratings. This system isn't designed to find movies; instead, it's designed to help you discover them through our rating system. Users will also be able to rate movies they've seen. It mines movie databases to collect all the important information, such as, popularity and attractiveness, required for rating.

Modules

Movie Ratings System Contains 3 modules

- Admin
- Film Manager
- User

Admin

- Central controller
- Allows user registration
- Verifying applications by various users
- Allows film moderators registration
- Allows movies addition
- Manage ratings if needed

Film Moderators

- Allow moderators login
- Allow moderators signup
- Add movies
- Add cast and crew
- Add ratings system
- Add movie details
- Add locations

User

- Allow users login
- Allow users signup
- View ratings
- View cast and crew
- View movie details
- Add ratings
- Add bookings
